

Video Telematics

Best in Class Live Video Technology

A simple-to-use dashboard camera, which can be used in any vehicle type and model. Front and in-cabin view allows fleet managers and drivers to track everything happening in and around the vehicle, lowering driver distraction and adding additional levels of safety.

Ituran Video Telematics was designed with commercial vehicles in mind, and comes with a rotating and locking feature which allows to set camera position as needed. The device comes with sensors which automatically detect driving conditions, and AI facial recognition technology that works day and night to alert distracted or drowsy drivers.

Instant access to view live video, in cab audio and visual alerts, and video events stored in the cloud for 30-days, for on-demand retrieval, allows to examine and analyze every event.

The camera is installed in less than 10-minutes.
